

Built for speed. Engineered for performance.

Up to 70% of a wall system's thermal performance can be degraded by thermal bridging... until now.

Technoform thermal isolator cladding clip:

Unique screw-holding fingers and visual guides help keep long screws straight and make alignment faster and easier... and miscues less frequent. Many advantages provide you with a safe, high-performing, and easy-to-install solution.

Structural-grade engineered composite reduces thermal bridging 533X better than aluminium.

Structural aluminium shell ensures high structural performance, even in the event of a fire. A unique center cavity allows for additional insulation for increased thermal efficiency.
